

git

Git'n Scriptin'

BY STEPHEN SLADEK

Git Gud

- ▶ Git is a command line tool used for version control
- ▶ Version control is used for keeping track of changes
 - ▶ Good for group projects
- ▶ Millions of developers are using it
- ▶ Some employers will not take you seriously unless you have a GitHub

Why Learn Git?

- ▶ Cause you should.

Setting up Git

- ▶ Download Git for Windows here:
<https://git-scm.com/download/win>
- ▶ If you're on Linux you probably already have it.

Setting up Git

- ▶ `git config --global user.name "username"`
- ▶ `git config --global user.mail "me@mail.com"`

Git Commands (Comprehensive)

- ▶ `git init {name}`
- ▶ `git clone {url}`
- ▶ `git pull`
 - ▶ `git fetch`
 - ▶ `git merge`
- ▶ `git add .`
- ▶ `git commit -m "Subject" -m "Body"`
- ▶ `git push`
- ▶ `git status`
- ▶ `git checkout -b {branchName}`
- ▶ `git stash .`
- ▶ `git revert {commit id}`

Git Commands (Essential)

- ▶ `git clone {url}`
- ▶ `git pull`
- ▶ `git add .`
- ▶ `git commit -m "Subject" -m "Body"`
- ▶ `git push`

GitHub

- ▶ Owned by Microsoft
- ▶ 40 million users
- ▶ Free web hosting for static websites
- ▶ Free organizations
- ▶ Issue tracking
- ▶ Task management

GitLab

- ▶ Alternative to GitHub
- ▶ Over 1 million users
- ▶ Just about all the same features as GitHub
- ▶ Free private repositories

GitLab

GitKraken

- ▶ Nice Windows GUI
- ▶ 1 million users
- ▶ Good Tracking System

axosoft
GitKraken

Bitbucket

- ▶ Used to be popular
- ▶ Stay away from it
- ▶ Might have 100,000 users

Bitbucket

Git Started

- ▶ www.github.com
- ▶ Make a repository named HelloWorld
 - ▶ Initialize with a README
 - ▶ <https://github.com/adam-p/markdown-here/wiki/Markdown-Cheatsheet>
- ▶ Create a new file called LICENSE
- ▶ Go to Git CMD and run the following command...

```
git clone https://github.com/{UserName}/HelloWorld
```

JavaScript

The Trifecta

HTML

JS

CSS

History of JavaScript

- ▶ Made in 1995 based off of Netscape's ECMAScript in a joint collaboration between Sun Microsystems and Netscape.
- ▶ Oracle now owns the JavaScript trademark since they acquired Sun Microsystems.
- ▶ As of 2016 Google Chrome conforms to 93% of EcmaScript's features while Mozilla Firefox supports 77%.
- ▶ JavaScript is a web scripting language. EcmaScript is a standard that scripting languages conform to.

World of JavaScript

- ▶ JavaScript can literally do everything
- ▶ MEAN Stack
 - ▶ MongoDB – NoSQL database
 - ▶ Express – minimalist server-side framework
 - ▶ Angular – fast, modular client-side framework
 - ▶ Node.js – library that enhances the features of JavaScript
- ▶ Other popular JavaScript libraries
 - ▶ ReactJS – heavy load bearing client-side framework
 - ▶ Vue.js – lightweight, scalable client-side framework

IN THE BEGINNING,
THERE WAS THE HEAVEN
AND THE EARTH

BUT THE EARTH WAS
FORMLESS AND BUGGY,
& WITHOUT DOCUMENTATION

AND THE PROGRAMMER
SAW THAT IT WAS
NOT GOOD.

THEN YOU SAID
"LET THERE BE LIGHT!"

YOU CREATE A HACK
SO THAT LIGHT IS PART
OF THE LAND

TO CREATE DARKNESS, YOU
NEED TO HIDE THE LAND,
BUT THAT'S OK CAUSE
CREATURES WON'T BE ADDED
UNTIL LATER.

AND STACKOVERFLOW
SAID IT'S FINE

ON THE SECOND DAY,
YOU MERGE WATER

BUT BECAUSE OF THE DEPENDENCY,
LIGHT BREAKS AS LAND
IS ACCIDENTALLY
FLOODED

YOU CHECK
STACKOVERFLOW
(IN THE DARKNESS)

IT'S THE THIRD DAY.
TURNS OUT THE CREATURES
NEEDED TO BE ADDED SOONER,
BUT THE CLIENT FORGOT TO
MENTION THAT.

YOU TRY TO ADD CREATURES
IN THE DARKNESS, BUT
THERE'S NO LAND WITHOUT
LIGHT, AND YOU CAN'T HAVE
LIGHT BECAUSE OF THE
WATER.

YOU ADD THEM IN THE
BROWSER USING COOKIES,
WHICH UNFORTUNATELY
MAKES THEM MORTAL

IT'S THE FOURTH DAY.
TURNS OUT THE ISSUES
WERE CAUSED BY THE
FLAT EARTH DESIGN

YOU DECIDE TO USE C++
TO CREATE A BALLOON
THAT INFLATES THE EARTH

YOU ALSO USE STL
FOR ABSTRACTIONS, AND
IT WORKS OUT GREAT
WITH NO
COMPLICATIONS
WHATSOEVER!

IT'S THE FIFTH DAY
YOU START ADDING
PEOPLE TO HELP
YOU.

YOU DECIDE TO CREATE
THEM IN YOUR LIKENESS,
WHICH IS A MISTAKE

THEY IMMEDIATELY
POPULATE THE EARTH
WITH HACKS, FADS
AND UNNECESSARY
JAVASCRIPT LIBRARIES

ON THE SIXTH DAY
YOU LOOK AT THE
CHAOS YOU CREATED

YOU ATTEMPT TO LEAD PEOPLE BACK TO SENSIBLE
PROGRAMMING, BUT IT IS TOO LATE-
EVERYTHING RUNS ON DEPENDENCIES.

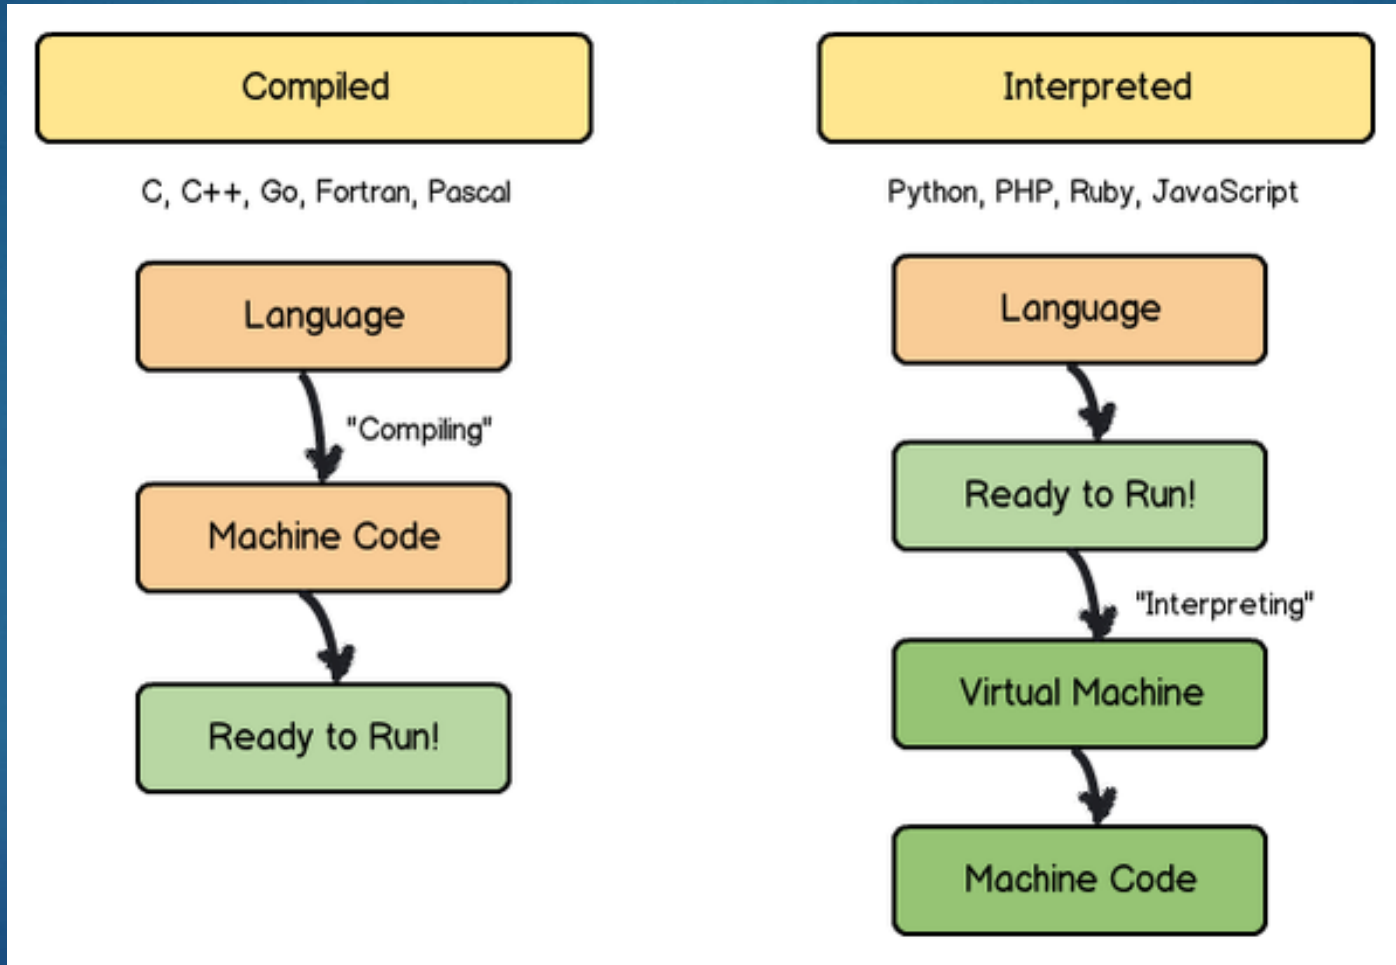

ON THE SEVENTH DAY
YOU REALLY WANT TO
REST, BUT YOU NEED TO
ORGANISE ALL YOU'VE
CREATED

Features of JavaScript

Interpreted

Typing

- ▶ Weakly typed
 - ▶ Interpreter guesses the type for you
- ▶ Anything can go into an array
- ▶ 6 Primitives
 - ▶ String
 - ▶ Number
 - ▶ Boolean
 - ▶ Undefined – has no value assigned
 - ▶ Null – has a value of no value assigned
 - ▶ Symbol – used for unique identifiers

Equals vs Equals

==

Used for loose comparisons

1 == "1" returns true

1 == 1 returns true

===

Used for strict comparisons

1 === "1" returns false

1 === 1 returns true

Declaring Variables

- ▶ const
 - ▶ you guys know constants
- ▶ var
 - ▶ global / function scope
- ▶ let
 - ▶ block scope
 - ▶ rebinds when being iterated, so it's good for loops and recursion
 - ▶ read more here: <http://www.jstips.co/en/javascript/keyword-var-vs-let/>

```
const i = 7;
function hi(){
  if(0 == "0" && 0 == '0' && '0' == "0"){
    var s = ["Hello", "World", '!', 1];
    var len = s.length;
    var j = s;

    for(let s = 0; s < len; s++)
      console.log(j[s]);
    //var i = 5; //syntax error
    let i = 5;

    for(let i = 0; i < len; i++)
      console.log(s[i]); //prints array s
    console.log(i); //prints 5
  }
  console.log(i); //prints 7
}
```

```
<!DOCTYPE html>
```

```
<html lang="en-US">
```

```
<head>
```

```
  <meta charset="UTF-8">
```

```
  <meta name="viewport" content="width=device-width,initial-scale=1">
```

```
  <title>Hello</title>
```

```
  <script src="js/hello.js" type="text/javascript"></script>
```

```
</head>
```

```
<body>
```

```
  <script>hi();</script>
```

```
</body>
```

```
</html>
```

Git'n Script

- ▶ Add your JavaScript to your HelloWorld folder
- ▶ Run these commands...

git add .

you can also use **git add /all** or **git add ***

git commit -m "Subject" -m "Body"

git push

Pulling Data

- ▶ Go to GitHub
- ▶ Make a change to your README.md
 - ▶ ### by firstName lastName
- ▶ Go back to Git CMD
- ▶ Run the following command...

git pull

Congratulations!

YOU DID IT!
